

**KeyConnect by Gradiant allows apps using standardized cryptographic interfaces to transparently use cryptographic keys stored in Cloud services like Azure Key Vault.**

**KeyConnect does not need to provision, configure, patch, and maintain HSMs and key management software** which will lead to a significant reduction in costs. The Cloud will also provide **scalability and availability** to meet applications requirements and match peak demand.

**KeyConnect**  
by gradiant

## Key security without the hardness and costs of HSM's

**KeyConnect** is a cryptographic platform aimed at multi-sector companies with needs to securely manage keys on HSM devices.

Using **KeyConnect**, applications will achieve the benefits of Cloud key management services without adding a line of code.

- ✓ Effortlessly transform your application to make the most of Cloud key management services
- ✓ Improve key security without the hardness and costs of HSM's provision and management
- ✓ Let your application grow without worrying about scalability and availability issue
- ✓ Seamless integration with Active Directory for user management.

Our solution is suitable for e-Government, e-Health, Banking, Trust Service Providers and online payments, among others.

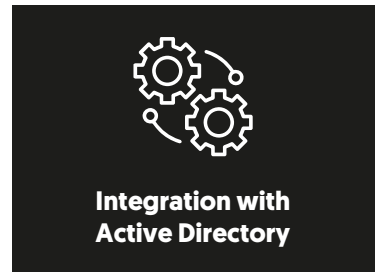

**Transparently use of Cloud key management**

**Scalability and Availability**

**Key security without the hardness and costs of HSM's**

**Integration with Active Directory**
