# Easy-to-use cloud crypto keys

---

## KeyConnect

by gradiant 

# KeyConnect by Gradiant

securely and efficiently manages your cryptographic keys, ensuring the protection of your most critical data while enabling seamless integration with cloud services like Azure Key Vault

Designed for enterprises, KeyConnect offers robust and scalable key management through standardized cryptographic interfaces. By removing the need to provision or maintain HSMs and key management software, it reduces operational costs and complexity. Its cloud compatibility and high availability make it an essential solution for organizations adopting cloud technologies with confidence and security.

**Key security made simple and cost-effective, without the complexity and expenses of HSMs**

KeyConnect is a cryptographic platform that enables multi-sector companies to securely manage keys on HSM devices. It provides the benefits of Cloud key management services effortlessly, allowing applications to integrate without any additional coding or complexity.

- ✓ Effortlessly transform applications to leverage Cloud key management services with no extra coding.
- ✓ Improve key security without the complexity and costs of HSM provision and management.
- ✓ Scale your application seamlessly without worrying about availability or performance issues.
- ✓ Integrate easily with Active Directory for efficient and centralized user management.

**Our solution is tailored for large and medium-sized banks, financial institutions, payment service providers, and regulatory authorities overseeing financial compliance, among others.**
